

All-Cause Mortality by hs-CRP Status Among Statin Users

NHANES 2005–2016 with mortality follow-up | Adjusted HR = 1.49 (1.03–2.15), P=0.032

 hs-CRP <2 mg/L  hs-CRP >=2 mg/L

Statin users (N=1,714) with up to 14 years mortality follow-up. 488 deaths occurred.

Elevated hs-CRP (≥ 2 mg/L) associated with 49% higher mortality risk after adjustment for age, sex, and race/ethnicity.

Number at risk
